THE POWER IS ALL YOURS

BENEFITS OF SD-WAN FOR YOUR BUSINESS

Reduced operational costs:

- Streamline your management through automation and self-service capabilities.
- Help your business minimise reliance on external IT professionals and save on costs.
- Reduces the need for extensive network hardware.
- Quickly and affordably establish new branches in any location.

Centralised management:

- Oversee and monitor your traffic from a centralised interface.
- Handle all your tasks through a single unified portal.
- Simplify your operations and track your applications more easily.
- Optimise performance from a single location.

Greater network agility:

- Direct your business traffic along the most optimal path.
- Prioritise real-time services like voice over internet protocol (VoIP) and critical business traffic
- Increase your speeds to meet real time needs.
- Help reduce the total cost of ownership by optimising bandwidth usage.

Improved security:

- Stay ahead of cybercrimes with essential built in security features.
- Firewalls and VPN's enhance your businesses protection.
- More robust security safeguards against data loss and downtime.
- Help mitigate against potential legal risks.

Enables cloud usage:

- Allows your business to securely access the cloud remotely.
- Benefit from cost reductions through reduced office space.
- Minimise the need for equipment and rent as employees can work remotely.
- Enhance the performance of cloud applications.

Reduced data complexity:

- Ensure better bandwidth allocation for better network performance.
- Monitor and alert users about the performance of different data types.
- Prioritise critical traffic to enhance overall performance.
- Direct traffic along the most efficient route to increase time and cost savings.
