

KCOM's perspective on the convergence of IoT and Cloud

Created by: Wayne Stallwood

June 2017

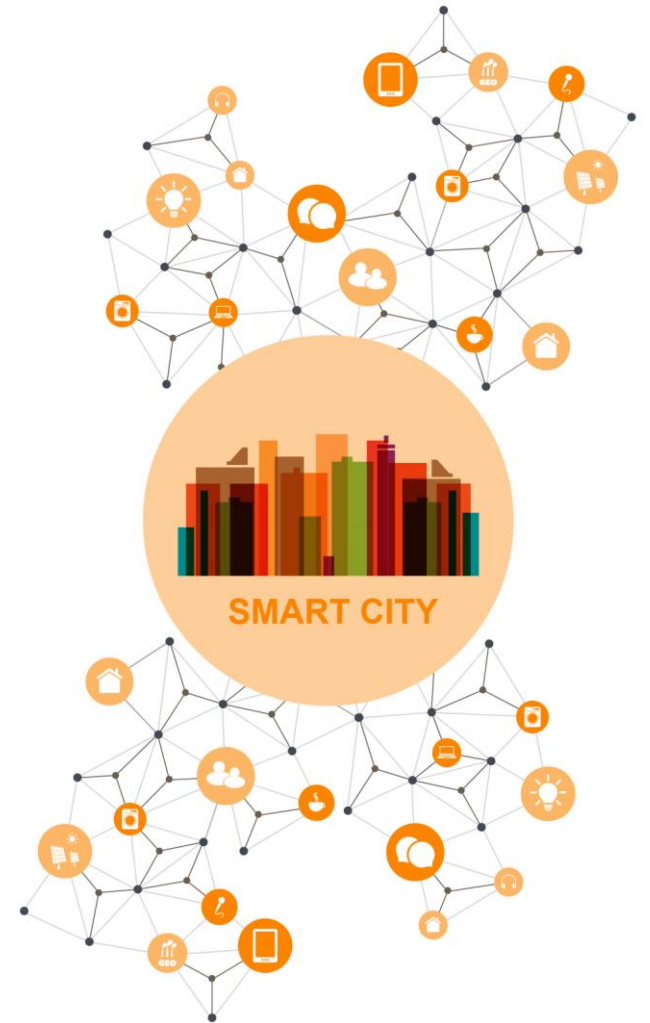

Characteristics of an IoT project

- Hidden boundaries delivering the service
- Location aware but network agnostic
- Each “thing” is uniquely identifiable
- Provides a benefit for two or more entities
- Integration of data and/or interconnections = value

Which Industries are leading on IoT...and why

- Industrial and Manufacturing – driven by cost and efficiency savings
- Smart Buildings – driven by environment issues and cost savings
- Smart Transportation – driven by operational efficiency
- Smart Metering / Grids - driven by environment issues and cost savings

KCOM

Security of IoT

- Time to Market

- Lack of security focus

- Bigger problems!

Cloud isn't the centre of the IoT universe (yet) !

- Cloud is becoming an integral element of any IoT deployment
