

Static IP Address Charges

Service description:

A static IP address is a fixed address assigned to internet connection, ensuring that IP address remains constant. This is essential for hosting servers, remote access, and other applications requiring a consistent IP address.

Service Compatibility:

Dedicated Internet Access (DIA):

Static IP addresses are available for all DIA services, providing a reliable and uncontended connection.

- By default, KCOM Wholesale includes a /30 IP range free of charge with each DIA service.
- KCOM Wholesale FTTP services allow you to swap or add a different IP range (up to a /24) for additional charges.

Fibre to the Premises (FTTP):

Static IP addresses are also available for FTTP services, ensuring high-speed and consistent connectivity.

- By default, KCOM Wholesale includes a /32 IP range free of charge with each FTTP service.
- KCOM Wholesale FTTP services allow you to swap or add a different IP range (up to a /29) for additional charges.
